BATTERY VOLTAGE SENSE
VADC = VBAT × (Rbottom / (Rtop + Rbottom))
= 8.7 × (10k / (22k + 10k))
= 2.72 V but Range is 3.3v 2.72 is safe value

DECOUPLING
STM32
NRST The MCU must stay in reset briefly until the power supply is stable.
So it blocks high-frequency switching noise.
